## **DETAILED ACTION**

### ***Drawings***

The drawings filed on June 14, 2001 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Zhang. Zhang teaches a lens having and eccentricity, which varies as an angular function, wherein the angle is measured in the plane of the contact lens as claimed in independent claim 12.

### ***Allowable Subject Matter***

Claims 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 16-30 are allowed. The following is a statement of reasons for the indication of allowable subject matter: The prior art taken either singularly or in combination fails to

Art Unit: 2873

anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented, for example, in independent claim 16 the contact lens having a constant eccentricity across a top portion is neither taught or suggested by the prior art. Independent claims 24 and 30 are allowable for reasons as set forth in the Office Action dated April 23, 2003.

### ***Response to Arguments***

Applicant's arguments filed July 25, 2003 have been fully considered but they are not persuasive. The applicant's representative has argued that the eccentricity of the contact lens is a function of an equatorial angle ( $\phi$ ) only and further points out that the prior art of record (Zhang) teaches eccentricity as a function of ( $\phi$ ) and also along the radius of the lens as indicated in Figure 4. It should be noted that Zhang teaches that this is just one embodiment of the invention disclosed and that the creation of an optical path difference may be achieved by selecting a band having a diffraction grating having a "cross-sectional profile in the form of an undulating curve", as indicated by the applicant's representative, or by "having refractive index change within the band". The latter would indicate that the contact lens of Zhang could be accomplished wherein the profile, as a function of contact lens radius, to be constant and thus read on the instant invention as claimed in independent claim 12.

*Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
